

# Editorial Policy

## Sources

We acquire sources from everywhere, but here are a few methods we often use:

- Reading studies in scientific journals, including widely known ones such as Science and Nature and journals focused on specific areas of Life science
- Attending scientific conferences to learn about new developments
- Talking with scientists, industry leader and policy makers
- Monitoring the latest developments in a field of life science to spot trends
- Open submission platform for external parties

## Content

In LifeScientist, you can find all kinds of information about life science, including new findings and techniques, career guidance and the latest life science trends.

## Editorial Style

Every scientific finding has caveats, limitations and alternate explanations. Our writers and editors use terms such as “suggests” or “could” when a finding is not yet certain. These terms reflect the fact that scientific research is an ongoing process. To ensure the quality and trustworthiness of our posts, our editors tend to report findings from peer-reviewed studies. But we will also consider writing about preliminary finding if its implications are striking.

We do routinely rewrite headlines and summaries if they need to be made clearer and more concise, but in any editing we strive to maintain the original intent of a release’s submitted version.

## Clarifications, Corrections and Retractions

Writers, editors, designers, and freelancers at *LifeScientist* make every effort to get the facts behind every story, every time, right. The articles we publish are professionally edited, and most are reviewed by a professional fact checker/copy editor. Nevertheless, mistakes, misspellings, or other miscues do happen. In the event that we publish a story containing objective factual errors, misattributions, or other substantive mistakes, we will correct it as soon as possible and post a dated correction, clarification, or editor’s note near the bottom of the article. If you detect an error in one of our articles please email [info@life-scientist.com](mailto:info@life-scientist.com). Corrections are made at the discretion of LifeScientist’s editorial staff.

## Ownership of website

*LifeScientist* is a EU-based publication for life-science professionals and the science-curious public that is dedicated to covering a wide range of life science fields. *LifeScientist* is owned by GenScript Biotech Corporation, a leading worldwide life sciences research and application service and product provider. GenScript Biotech aims to deliver trusted, high quality and speedy services and products to empower our customers and advance their research.
